

MFA MULTI-FACTOR AUTHENTICATION

MFA (multi-factor authentication) is becoming ever present. If you've ever been sent a text with a code after you've tried logging into a website, you've experienced it.

YOU ARE NOT PROTECTED WITHOUT IT

Multi-factor authentication is an authentication method in which a computer user is granted access only after successfully presenting two or more pieces of evidence such as a password and a code texted to your mobile.

ARE YOU PROTECTED AGAINST CREDENTIAL PHISHING?

BEST

Multi-Factor Authentication plus all of the items under Better

BETTER

Internal IT/MSP focused on Security
Password Policy
Security Awareness Training
Security Hardening
Back-up Policy

POOR

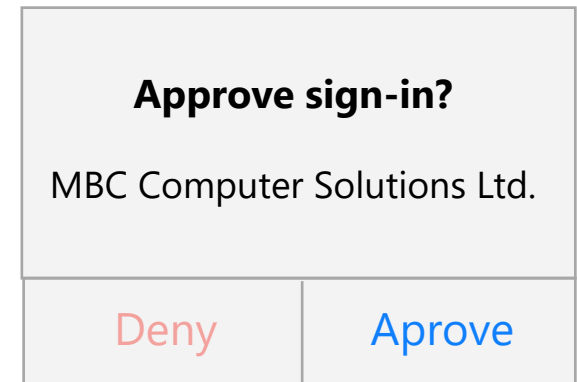

No MFA
No Security Policy in Place
No Back-up Policy

MFA IS CRUCIAL TO YOUR SECURITY

Your account is 99.9% less likely to be compromised if you use MFA

HOW IT WORKS

Even if your username and password is phished or otherwise disclosed to a cybercriminal, MFA will block a cyber criminals attempt to login to your e-mail or computer. It is that simple.

Step 1:
Username and Password

Step 2:
Unlock Phone

Step 3:
Click Approve
